When parents make judgments about the schools in their communities, they usually consider such factors as whether the schools offer a rich, high-quality educational experience, whether they have a safe and orderly environment, and how well they prepare students for higher education and jobs. Without a doubt, these factors are critical. But schools are also places where children learn social and citizenship skills that help them to live harmoniously and become contributing members of society. In a nation as complex and diverse as the United States, a critical part of becoming a good citizen is learning how to get along with others, especially those whose racial, ethnic, religious, or economic backgrounds are different from our own.

Parents recognize that getting along with others is a necessary skill. In a 1998 survey by Public Agenda, 97% of White parents and 97% of Black parents agreed with this statement: “Our country is very diverse and kids need to learn to get along with people from different cultures and ethnic backgrounds.”

Public schools are one of the main institutions that create cohesion among diverse groups of Americans. For more than 150 years, public schools, or “common schools” as they were once known, have played a vital role by bringing together young people from various backgrounds and preparing them for the responsibilities of citizenship. Admittedly, not all public schools live up to this ideal of producing informed citizens. Nor do all public schools enroll rich and poor, immigrant and native-born, and children from various racial and ethnic backgrounds. Many public schools today are racially and economically isolated. But these shortcomings do not diminish the importance of teaching children to be tolerant of differences, to understand and appreciate other cultures, and to respect other people’s views.
The children of today will come of age in a United States that has greater racial, ethnic, linguistic, and religious diversity than ever before.

1. Our nation is becoming more diverse.

The children of today will come of age in a United States that has greater racial, ethnic, linguistic, and religious diversity than ever before. Immigration is a major contributor to this diversity. We are in the midst of the largest sustained wave of immigration that the nation has ever experienced. By the middle of the next century, demographers predict that no single racial or ethnic group will constitute a majority.

- In 1997, 35% of children under the age of 18 were from minority groups. By 2020, this proportion is expected to increase to 45%.
- Today, 20% of the children in school are immigrants or have parents who are immigrants. In contrast to earlier waves of immigration, most new arrivals to our nation come from Asia and Latin America; only 12% come from European nations.
- The U.S. is becoming more religiously diverse, with Islam the fastest-growing religion in the nation.

2. Our workforce is becoming more diverse and our economy more international.

Our children will enter an American workforce that is diverse in composition and global in reach. The economies of the world are becoming more and more linked, and developing nations are becoming increasingly important in our trade relations. An essential job skill for the 21st century will be the ability to relate well to people—both at home and abroad—who come from many different racial, ethnic, and cultural backgrounds. The U.S. is unlikely to remain economically competitive unless our workers know how to cooperate with each other and to deal effectively in the global marketplace.

- The U.S. has regained its position as the world’s largest exporter, with considerable growth in exports of manufactured goods, high technology goods, services, and agriculture. Trade is now equivalent to nearly 30% of our GNP—up from 13% in 1970.
- The fastest growing markets for U.S. goods and services are in Latin America and the Caribbean. By 2000, our exports to these two destinations are projected to outstrip our exports to the European Union. We are also expanding our trade activity in Asia.

3. National cohesion and social harmony depend on people overcoming divisions and understanding each other.

The tranquility of our communities will depend on people being able to reach consensus about solutions to the problems of the day. Blacks, Hispanics, Whites, Asians, and Native Americans will all need to be tolerant and respectful of each other, or we run the risk of great social unrest, political upheaval, and economic decline. Our children, our grandchildren, and our nation will pay a very high price in the years ahead if our country is divided along racial, ethnic, religious, or economic lines.

- The war in Bosnia and other ethnic and religious conflicts around the globe illustrate what can happen when groups of people cannot achieve a common national identity.

Why is it in the national interest for children to learn tolerance and respect for those different from themselves?
Why are public schools a good place for children to learn respect and tolerance of others?

1. In general, public schools better reflect the diversity of American society than private schools.

   - Public schools enroll a more diverse student population than do private schools or many other institutions, like churches and clubs.
   
   - In 1993-94, nearly one-third of public school students were from racial or ethnic minority groups, as compared with 20% of private school students.

   - Public schools educate students of many different religions, unlike private schools, which are often sponsored by a particular religious group.

   - Public schools are also more likely to enroll children who speak a variety of languages; more than 150 languages are spoken by the limited-English-proficient populations in our public schools. Schools with linguistically diverse populations can provide rich learning opportunities for both children who speak English and children who speak a different language.

   - The vast majority of children with disabilities are served in public schools.

   - In general, public schools are more likely than private schools to enroll children from a variety of economic backgrounds.

2. Public schools are a place where children learn social skills naturally.

   - In diverse public schools, students can learn about other races, ethnic groups, and cultures through normal interactions, observations, and friendships, rather than through stereotypes and prejudices, or through television, movies, and books.

   - As the number of gated communities grows, and as communities in some areas become more economically stratified, it is increasingly important for children to learn alongside people who are different from their families and neighbors.

3. Throughout our nation’s history, public schools have helped to promote social harmony.

   - During earlier waves of immigration, public schools were one of the primary institutions responsible for building a common culture and teaching democratic virtues. More recently, public schools have helped to promote progress in civil rights by bringing together children of different races during the formative years, before prejudices have taken root. Social harmony remains an important goal, but we cannot take for granted that it will happen on its own. Whether our children and grandchildren will live in harmony or discord will be influenced in large part by their educational experiences.

   - As just one indicator of advances in racial tolerance, the fraction of Whites who said in the Gallup polls that they would move if Black families moved in next door fell dramatically from 44% in 1958 to 1% in 1997 (this question was not asked consistently of people of other races).
Conclusion

Instead of advocating that students abandon the public schools, we must all work together to improve public schools, so they are all safe places of learning that offer a quality education. With those elements in place, all public schools will be able to fulfill their unique role in our democracy and help to promote tolerance and respect among our nation’s diverse population.
